MD (Pediatrics)
Raipur (C.G.)

Dr. Tej Prakash Sinha (MBBS, MS)
Department of Emergency Medicine
AIIMS, New Delhi

Dear Sir/ Madam,

India's Covid cases are on the rise in the wake of the second wave. With over 4 lakh cases per day and an increased mortality rate, the health infrastructure is overburdened. Despite the vaccination drive, it is expected that India will have a third wave of Pandemic. In the current scenario, it is essential to enhance the knowledge of the people regarding Pandemic. When someone is asymptomatic, he/she is advised to isolate themselves to prevent community transmission. Symptomatic patients with trouble breathing or other medical complications are admitted to hospitals. There are quite a few myths regarding home isolation, symptomatic/asymptomatic patients. People are also not aware of the involvement of lungs as Covid progresses. People are also apprehensive about CT scan and the requirement of oxygen support. Along with these misinterpreted facts, the other apprehension is the vulnerability of children to coronavirus infection. The Supreme Court recently stated that the children may get affected more severely during the third wave of the Pandemic. All these facts are creating panic in the general population and they have to make aware about home isolation, lung infection in corona and susceptibility of children to Covid 19. Keeping this in mind it has been proposed to conduct a National Webinar on "Awareness Building on Covid-19 for teachers and students. This will enhance the knowledge of teachers and students which they can pass on to the other members of the society, and they have to make aware about home isolation, lung infection in corona and susceptibility of children to Covid 19. This Webinar will serve to create awareness about these issues.

AIMS of WEBINAR

1. Coronavirus outbreak and children
2. Home isolation - Dos and don't
3. Covid - Myths and facts
